T1 HOIST FOR PERSONNEL AND MATERIALS

Load capacity 28 persons
Up to 2.500 kg
Travel speed up to 70m/min

TORGAR elevators are robust and reliable with minimal maintenance costs. Available in single or double cabin configurations, TORGAR elevators are characterized by high speed and reliability, two key factors in major projects, and thus offer the best solution for smooth and efficient operation. TORGAR hoists have been used for more than 30 years in all types of applications for construction and industrial sectors. Therefore, they are the optimal solution for vertical transport in applications such as cement plants, power plants, building construction, bridge construction, etc.

All TORGAR elevators are designed and manufactured in accordance with European Machinery Directive 2006/42/EC and the European Standard of elevators EN 12159. We also have specific versions for permanent applications according to the Lifts Directive 95/16/EC (Standard EN 81), as well as versions compliant with ATEX regulations for hazardous areas.

PL TRANSPORT PLATFORM

Made entirely of hot galvanized steel and aluminum, PL transport platforms also use rack and pinion built-in module 8 to provide maximum strength and long life. It has wheels and optional leveling spindles and load limiter. Wall ties include telescopic bracing with tensioning screws for a firm and perfect verticality of the tower. Its emergency safety brake installed on a separate pinion stops the car in the event of a sudden increase in the descent speed.

All TORGAR transport platforms are designed and manufactured according to the European Directive 2006/42/EC (Standards EN 16719).

PT SERVICE ELEVATOR

A robust construction to withstand the toughest conditions of use. Easy and safe to assemble and disassemble. The assembly of the sections and the anchoring to the facade is done from inside the cabin. The rack and pinion lifting system requires minimal maintenance.

Safe and reliable, the PT Service elevator also distinguishes itself by its versatility.

**For applications in Mines,
Cement Plants, Power
Plants, Bridges, Tower
Cranes, etc.**

At TORGAR, the quality of our products and the support to our customers is a priority.

Training:

We offer to our distributors and to our users, training for assembly and maintenance of our TORGAR equipment. The courses can be performed on-site or at our headquarters in Spain.

Technical support:

Our TORGAR team will study the best setup options for the development of your application or for a special project.

Maintenance:

We offer maintenance contracts for all our machines in the world.

Logistics:

We analyze the fastest transportation options and economic shipping of our products to any country.

TORGAR is the Solution for lifting what you need
